

Come and meet the coolest ARB family.

With the ARB 47L fridge freezer gaining popularity and acclaim within the 4WD community due to its unique design and outstanding performance, ARB Corporation is pleased to announce the addition of 3 new fridge sizes to make a family of fridges to suit 4WD families.

Welcome additions are the ARB 35Litre, ARB 60Litre and ARB 78 Litre where each model has been determined by the actual internal volume of the fridge. The most obvious differences are the height and footprint. In simple terms the 47 and 78 share the same height, the 35 and 60 share the same “squat” height. The 35L and 47L share the same footprint (D x W) and the 60 L and 78L share the same extended footprint.

35 Litre; this compact fridge with its low profile enables placement into Ute tubs under tonneau covers, on top of cargo drawers, suits many compact SUV’s and provides for better visual access into the fridge. Great size for a couple or as a second fridge the 35L holds a class leading 50 cans.

47 Litre; the most popular size portable fridge on the market. Suitable for many medium to large SUV’s, wagons and Utes the internal capacity with a class leading 72 cans is a clear favourite.

60 Litre; this fantastic fridge with its low profile enables placement into ute tubs under tonneau covers, on top of cargo drawers, suits larger 4WD wagons, utes, camper trailers and provides for better visual access into the fridge. Great size for a family or touring with a class leading 90 cans.

78 Litre; the big daddy of ARB fridges. A capacity of 120 cans provides sufficient space to keep a family in food and beverage for long term touring or as a community fridge when venturing outdoors with mates. Suits large 4WD wagons, utes and camper trailers.

Designed with four wheel drivers in mind, ALL models have a front opening lid creating improved access to the fridge contents and making them a perfect partner for fridge slides. Utilising the patented ARB hinge system further enhances access to the internal contents. How about this – the internal size is big enough to fit a 2 litre coke bottle or a champagne bottle in EVERY model.

Each new model will be available from December 2010.
